HAND INSTALLATION PROCEDURE

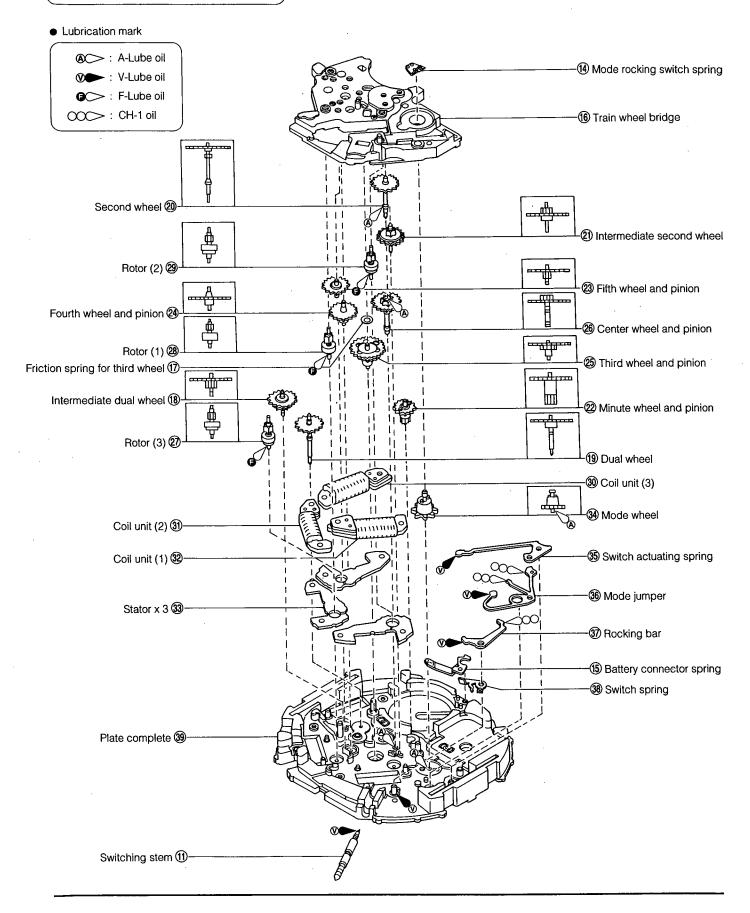

Step	C310	C320
All-reset operation	 (1) Pull out the button. (2) Press and hold the a, and buttons simultaneously for 2 seconds. (3) Push in the button to the normal position. 	 (1) Pull out the button. (2) Press and hold the a, and buttons simultaneously for 2 seconds. (3) Push in the button to the normal position.
2 Confirmation of display of <tme> mode</tme>	(1) Press the button and find out the <tme> mode and check the display. (Time/Calendar is displayed on the digital section.)</tme>	(1) Press the button and find out the <tme> mode and check the display. (Time/Calendar is displayed on the digital section.)</tme>
Mounting of mode hand (For only Cal. C320)		Mount the mode hand to the center of print of "TME".
Positioning	(1) Press the (1) button and set the watch in the <chr> mode. (2) Pull out the (1) button.</chr>	(1) Press the button and set the watch in the <chr> mode. (2) Pull out the button.</chr>
5 Mounting of each hand	Mount each hand. • Function hand: 0 position (12-o'clock postion) • 24-hour hand: 24-hour position • Hour and minute hands: 12:00 position • Second hand: 00-second position (12-o'clock position) After mounting the hands, press the button into the normal position.	Mount each hand. • Function hand: 0 position (12-o'clock postion) • 24-hour hand: 24-hour position • Hour and minute hands: 12:00 position • Second hand: 00-second position (12-o'clock position) After mounting the hands, press the button into the normal position.
6 Confirmation of 0 position	 (1) Set the watch in the <chr> mode.</chr> (2) Pull out the button. If any hand is not at the 0 position, correct in by operating the buttons. 	 (1) Set the watch in the <chr> mode.</chr> (2) Pull out the button. If any hand is not at the 0 position, correct it by operating the buttons.

PRECAUTIONS FOR DISASSEMBLY AND ASSEMBLY

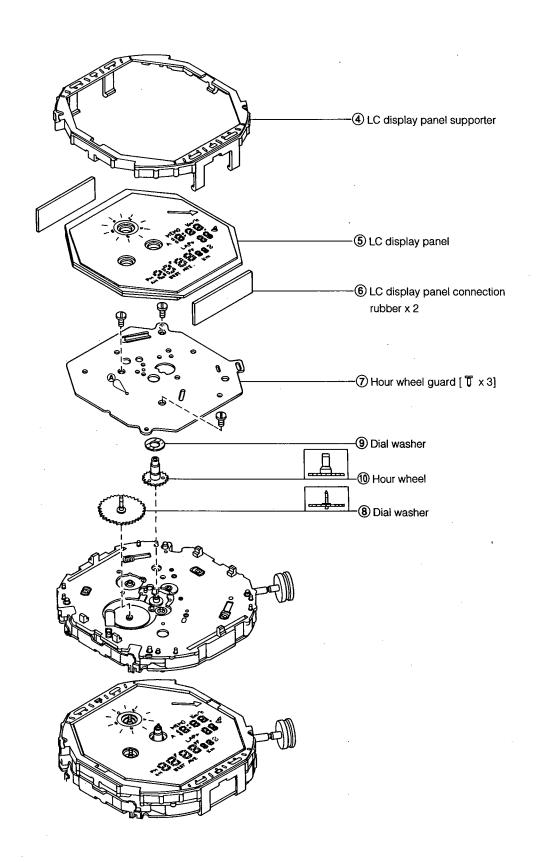

DISASSEMBLY AND ASSEMBLY OF MOVEMENT

Disassembly procedure: $\textcircled{1} \rightarrow \textcircled{3}$ Assembling procedure: $\textcircled{3} \rightarrow \textcircled{1}$

Completion No good ◆ Replacement of coil Check of dial side mechanism Replacement of defective parts Check of appearance and functions O.K Replacement of unit of electronic circuit of LC display panel connection part. Measurement of current consumption Measurement of time rate Measurement of battery voltage / No good Replacement of unit of electronic circuit Replacement of unit of electronic circuit Correction or replacement 12 / Measurement of coil resistance Check of train wheel 0.K. Replacement of power cell Replacement of unit of electronic circuit Replacement of unit of electronic circuit O. X. No good No good S 9 Measurement of time rate Check of LC display panel connection parts Check of connection part Confirmation of output signals Low voltage ∞ O.K. 0.K Correction Correction N က 4 Measurement of power cell voltage Confirmation of using condition No digital display Analog stop Defective digital display/Normal INormal display/ working analog working Normal digital display Analog stop TROUBLESHOOTING AND ADJUSTMENT · No good · No good 0.K 0. X. တ poob.oN Replacement of battery Measurement of time rate Measurement of battery voltage Check of switch mechanism Check of alarm O. K. Low voltage 9 F ∞ ~ (Incomplete switch of displays, etc.) Defects in operation Worng time rate Defective alarm No display Watch stop

Check Items	How to Check	Results and Treatment
Measurement of battery voltage	* Refer to Technical Manual Basic Course II-1-a. <tester 3v="" d.c.="" range:=""> • Common to CAL. C310 and C320 AAAAAAAAAAAAAAAAAAAAAAAAAAAAAAAAAAA</tester>	Over 1.5 V → Non defective Under 1.5 V → Replace the battery
Confirmation of output signal	* Refer to Technical Manual Basic Course II-1-b.	Tester pointer swings. → Non defective Tester pointer does not swing. → Check of conection part

Check Items	How to Check	Results and Treatment
3 Check of LC display panel connection parts	* Refer to Technical Manual Basic Course II-2-a, Digital section. — Preparation for check — Pull the button and press the and buttons at the same time, and all the segments light up. (If the button is returned, this condition is reset.) — Check — • Check of all segments Check all the seguments for a defect. • Check of continuity of LC display panel, its connection rubber and plate complete Check each part for stain, breakage, etc.	 The LC display panel, its connection rubber or plate complete is not installed normally → Re-install There is dirt of stain → Remove dirt and stain A part is cut, broken or scratched → Replace deffective parts
Check of connection part	* Refer to Technical Manual Basic Course II-1-a, Analog section.	
5 Measurement of coil resistance	* Refer to Technical Manual Basic Course II-1-c. — Preparation for measurement — • Remove the electronic circuit to measure the coil resistance. — Measurement — • The tester lead pins have no polarity.	Cal. C310 • Resistance of each of coils • A and ⓒ is 1.9 kΩ ~ 2.3 kΩ → Nondefective • Resistance of coil ® is 1.1 kΩ ~ 1.6 kΩ → Nondefective • Out of above range → Replace the coil unit. Cal. C320 • Resistance of each of coils • A and ⓒ is 1.1 kΩ ~ 1.6 kΩ → Nondefective • Resistance of coil ® is 0.5 kΩ ~ 0.9 kΩ
	<tester 10="" r="" range:="" x=""></tester>	 → Nondefective Out of above range → Replace the coil unit.
6 Check of train wheel	 * Refer to Tchnical Manual Basic Course II-2-b. • Check the gears and rotors for dust and oil. • Check the plastic parts and pinions for crashing, deformation, bend of shaft, etc. 	

Check Item	How to Check	Results and Treatments
7 Check of dialside mechanism	* Refer to Technical Manual Basic Course II-2-c. • Check the parts for deformation and confirm that they are lubricated well.	
Measurement of time rate	* Refer to Technical Manual Basic Course II-2-d. <measurement 10="" analog="" range:="" seconds=""> • The time rate cannot be adjusted.</measurement>	This time gains or loses largely. → Replace the electronic circuit unit.
Confirmation of using condition	* Refer to Technical Manual Basic Course II-2-e.	
① Check of alarm mechanism	 ① Check of movement Push the switch return spring of the circuit unit supporter with tweezers, etc. to bring it contact with the pattern of the plate complete to confirm the switching function. Check for removal of the pattern from the electronic circuit and the switch return spring for deformation. ② Check of push buttons Check the push buttons for deformation and dirt. 	 No problems in switch mechanism → Check the push buttons Any push button is dirty or deformed → Clean or replace the push button
	Caution: Apply silicone oil to the packings of the push buttons without fail. It is necessary for maintenance of water resistance and smooth operation.	

Check Item	How to Check	Results and Treatments
① Check of alarm	* Refer to Technical Manual Basic Course II-1-d.	
	— Preparation for check —	
·	① Set the movement in the case with the case back removed.	
	② Press the M button to select "ALM" mode.	
	— Check —	
	③ Apply the positive ⊕ lead pin to the battery surface and	 Tester pointer does not
	the negative ⊖ lead pin to the buzzer contact spring, and push and hold the (A) and (C) buttons simultaneous-	swing → Replace the unit of
	ly.	electronic circuit
	(In the case of Cal. C310, press and hold the © button.)	Tester pointer swings
		→ Nondefective
	O C A O RO	♥ Go to ④.
	(a) 220:44 (C)	GO 10 (4).
·		
		If no defects are found, install the buzzer contact spring
		correctly.
	JAPAN CITIZEN WATCH CO. MO JEWELS Q. C	
:		
	<tester 0.3v="" d.c.="" range:=""></tester>	
	If the alarm output is normal, perform the following checks.	
	Check the piezo-electric element of the vibrating plate	
	for cracking and breakage. • Check the buzzer contact spring for bend and defor-	
	mation.	
ŀ		
		·

Check Item	How to Check	Results and Treatments
Measurement of	* Refer to Technical Manual Basic course II-1-f.	
current con- sumption	— Preparation for measurement —	
sumption	① Set the battery to the tester.	
	② Press the M button to select "TME" mode.	
	③ Set the test lead pins to the movement.	
	Battery connector spring	•
	* Use the minus pattern of the movement. If the battery connector spring is pushes to strongly, it will be shorted to the 24-hour wheel and current consumption cannot be measured correctly. — Measurement —	<common and="" c310="" c320="" cal.="" to=""> • Current consumption of the movement Under 3.0 µA → Non defective Over 3.0 µA → Check and clean the train wheel and dialside mechanism. Current consumption measured again Over 3.0 µA → Replace the electronic</common>
	 Measurement — Short the AR terminal to the circuit unit supporter to perform the all-reset operation. <tester 10µa="" d.c.="" range:=""></tester> 	circuit.
	Circuit unit supporter AR terminal	
	* Precautions for measurement of current consumption.	
·	 ① When the tester lead pins are applied, abnormally large current flows and the meter exceeds the maximum point for a moment. This does not indicate a trouble. In this case, start the measurement with the tester at a higher range, then change the range one step by one. ② If the movement is exposed to the light of an incandescent lamp or the sun, more current may be consumed and the watch may not function normally. 	
Check of	* Refer to Technical Manual Basic course II-2-f.	
appearance and	Check the inside of the case for dirt.	
functions	Confirm that each correcting switch works normally.	
	Confirm that each correcting switch works normally. Confirm that all the segments are normal.
